Ethos Achieves Milestone: Submits Inaugural Transmission Application for 400 MW Clean Energy Project in the Midlands to National Grid ESO

10th March 2021

London, UK – Ethos, a frontrunner in energy development, has achieved a significant stride towards a sustainable energy future by officially submitting its first Transmission Application on 10th March 2021. This application, focusing on a substantial 400-megawatt (MW) project in the Midlands, has been formally presented to the National Grid Electricity System Operator (NG ESO).

This milestone underscores Ethos's unwavering commitment to driving the transition towards clean, renewable energy sources. The submission highlights Ethos's dedication to tapping into the Midlands' untapped renewable energy potential, aligning seamlessly with the UK's ambitious green energy objectives.

By initiating this Transmission Application, Ethos is showcasing its proactive approach to harnessing the renewable energy potential in the Midlands. The project's successful implementation would significantly contribute to boosting the UK's renewable energy capacity, propelling the nation closer to its clean energy targets.
