NEWS RELEASE

Ethos Green Energy and Frontier Power Sign Landmark Joint Development Agreement

15th April 2025

Collaboration to develop up to 20 GWh of long-duration energy storage, 5 GW of solar and 5 GW of data centre capacity across the UK

Ethos Green Energy Limited and Frontier Power Limited today announced the signing of a Joint Development Agreement to accelerate the UK's clean energy transition.

Under the agreement, Ethos will provide exclusive access to multiple connection points and land options to support Frontier's development of energy projects across the UK. With access to connection offers of more than 10 GW, the collaboration is expected to enable a pipeline of up to 20 GWh of long-duration battery storage, approximately 5 GW of solar and approximately 5 GW of data centre capacity at selected sites.

The first phase will target long-duration energy storage projects eligible for Ofgem's Cap and Floor scheme, using flow and zinc-based battery technologies. The collaboration will also progress solar projects alongside data centres at strategic locations, maximising the value of shared infrastructure.

Simon Wragg, CEO of Ethos Green Energy, said:

"At Ethos, our mission is to revolutionise the UK's energy landscape through scalable renewable solutions. Partnering with Frontier allows us to turn that vision into reality. Together, we are committed to creating sustainable energy hubs that integrate generation, storage and demand centres."

Humza Malik, CEO of Frontier Power, added:

"By combining our expertise with Ethos', we have an unparalleled portfolio of connection points and land options. Together we are poised to deliver transformative projects that will enhance energy security, reduce costs for consumers and support the UK's net-zero ambitions."

About Ethos Green Energy

Established in 2021, Ethos Green Energy is a UK renewable energy developer with more than 16GW of projects across 25 locations. The company develops large-scale renewable energy energy infrastructure and storage projects and is one of the UK's largest developers by transmission connection capacity.

About Frontier Power

Founded in 2009, Frontier Power is a leading developer of innovative energy solutions with expertise spanning electricity interconnectors, offshore wind transmission and energy storage.
